

TURTLE Project

Together Understanding and Restoring Turtles in our Landscapes and Ecosystems

Freshwater turtles are declining across South Australia – and together, we can help.

Our goals

- Raise awareness of turtles and why they matter
- Encourage researchers and citizen scientists to collect vital data
- Protect turtle nests and habitats
- Create a South Australian turtle management plan to guide future conservation

How we are making this happen

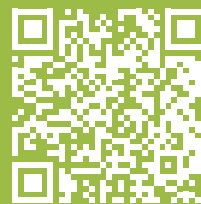

- Workshops and community events
- Recording community observations through TurtleSAT
- Nest surveys and turtle monitoring
- Habitat protection – fencing, signage
- Development of a turtle management plan

How you can get involved

This project brings together a wide range of passionate partners including landscape boards, First Nations groups, local councils, non-government organisations, scientists, community members, landholders, and citizen scientists.

We need everyone's help to:

- record turtle sightings in TurtleSAT
- attend local events and share information
- spread the word about turtle conservation
- keep up with the latest updates by following flow.landscape.sa.gov.au/turtle-project
